WETLAND INVENTORY MAPS

Wetland inventory maps have been drafted pursuant to Part 303, Wetlands Protection, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended. The purpose of the wetland inventory is to provide potential and approximate locations of wetlands and wetland conditions. It is intended that the inventories be used as one tool in planning for development, open space designations, zoning, etc. as a way to protect wetland resources. The maps are not intended to be used to determine the specific locations and jurisdictional boundaries of wetland areas subject to regulation under Part 303. Only an on-site evaluation performed by the Michigan Department of Environmental Quality in accordance with Part 303 can be used for jurisdictional determinations. The Michigan Department of Environmental Quality has a Wetland Identification Program to assist property owners with identifying the location of any wetlands on their property and whether the wetlands are regulated.

Wetland inventories for the state have been produced on a county-by-county basis, all in the same manner. Inventories are being produced by overlaying data from the following sources:

1. The National Wetland Inventory (NWI), conducted by the U.S. Fish and Wildlife Service through interpretation of topographic data and aerial photographs.
2. Land Cover, as mapped by the Michigan Department of Natural Resources' Michigan Resource Inventory System (MIRIS), through interpretation of aerial photographs.
3. Soils, as mapped by the U.S. Department of Agriculture, Natural Resource Conservation Service.

TERMS OF SALE:

- Prices are subject to change without notice.
- Michigan residents must add 6% sales tax - if ordered from or sent to a Michigan address.
- All maps are folded unless otherwise specified.
- Shipping charges are:
